Gas Turbine Performance and Maintenance

Rainer Kurz, Solar Turbines; Klaus Brun and Melissa Poerner, SwRI; Jim Benson, Sr. Camfil Farr

This shortcourse addresses the application of gas turbines in the oil and gas industry. It continues where last year’s shortcourse on centrifugal compressors ended.

The shortcourse covers gas turbine performance, gas turbine maintenance, the integration with driven equipment, gas turbine fuel considerations, testing, as well as packaging, with particular emphasis on air filtration.
